**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

### Office Action Summary

**Application No.**

10/698,721

**Applicant(s)**

PIETRASKI, PHILIP J.

**Examiner**

DUNG LAM

**Art Unit**

2617

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-5, 12-16 and 32-36 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_ is/are allowed.
- 6) ☐ Claim(s) 1-5, 12-16 and 32-36 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-8508)
- Paper No(s)/Mail Date \_\_\_\_.

- 4) ☐ Interview Summary (PTO-413)
- Paper No(s)/Mail Date \_\_\_\_.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_

## DETAILED ACTION

### *Continued Examination Under 37 CFR 1.114*

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/25/08 has been entered.

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claim(s) **1, 12 and 32** are rejected under 35 U.S.C. 102(e) being anticipated by

**Qui** (US Pub. No. 20020097686)

3. Referring to claim **1**, **Qui** teaches a method for providing feedback regarding the quality of a communication channel which is transmitted between a transmitter and a receiver ([0014]); the method comprising:

- receiving a downlink data communication ([0016]);
- performing at least one current quality measurement on said downlink data communication to determine the current quality of said downlink data channel (obtain CSI, [0016]);

- deriving, based on said performing step, a predictive channel quality indication (CQI) estimating the future quality of said downlink data channel ([19, 25]) and
  - transmitting said predictive CQI wherein said predictive CQI includes at least one of a recommended transport block size, modulation format, or number of codes ([20-21, 25, 26, 45]).
4. Referring to **claim 12**, **Qui** teaches a method for providing channel quality measurements on a downlink communication ([0014]); the method comprising:
- monitoring said downlink communication channel at said receiver ([16]);
  - performing at least one current measurement on said downlink communication channel to determine the current quality of said downlink data channel ([0016]);
  - deriving, based on said performing step, a predictive channel quality indication (CQI) estimating the future quality of said downlink data channel ([0019, 25]); and
  - transmitting said predictive CQI from said receiver to said transmitter wherein said predictive CQI includes at least one of a recommended transport block size, modulation format, or number of codes ([20-21, 25, 26, 45]).
5. Referring to **claim 32**, **Qui** teaches a method for providing feedback regarding the quality of a communication channel which is transmitted between a transmitter and a receiver ([14]);
- the method comprising: receiving a downlink data communication ([0016]); receiving a said pilot channel communication ([0016]);

- performing at least one current quality measurement on said downlink data communication and said pilot channel communication to determine the current quality of said downlink data channel ([0016]);
- deriving, based on said performing step, a predictive channel quality indication (CQI) estimates the future quality of said downlink data channel ([19, 25]); and
- transmitting said predictive CQI from said receiver to said transmitter wherein said predictive CQI includes at least one of a recommended transport block size, modulation format, or number of codes ([20-21, 25, 26, 45]).

6. Claim(s) **1, 12 and 32** are rejected under 35 U.S.C. 102(b) being anticipated by **Balachandran** (EP0899906)

7. Referring to claim **1**, **Balachandran** teaches a method for providing feedback regarding the quality of a communication channel which is transmitted between a transmitter and a receiver ([0014]); the method comprising:

- receiving a downlink data communication ([0040]);
- performing at least one current quality measurement on said downlink data communication to determine the current quality of said downlink data channel ([0016, 40]);
- deriving, based on said performing step, a predictive channel quality indication (CQI) estimating the future quality of said downlink data channel ([30]) and

Art Unit: 2617

- transmitting said predictive CQI wherein said predictive CQI includes at least one of a recommended transport block size ([30, 40]), modulation format, or number of codes.
- Regarding claims **12 and 32**, they are claims that have the same limitations as claims 1, thus are rejected for the same reasons.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims **2-3, 13-14 and 33-34** are rejected under 35 USC 103(a) as being unpatentable **Qui** and **Bergel** (U.S. Publication No. 2004/0142698).
9. Referring to claims **2, 13 and 33**, **Qui** does not explicitly teach including storing said at least one current quality measurement (0026 and Figure 4B). In an analogous art, **Bergel** teaches the step of storing at least one current quality measurement (S120, [0048, 0049] and Figure 4B). Therefore, it would have been obvious for one of ordinary skill in the art at the time of the invention was made to combine the admitted prior art's teaching of deriving a predictive CQI with Bergel's teaching of storing at least one current quality measurement to compare the past and present values to provide a more accurate estimate value.

10. Referring to claims **3, 14 and 34**, admitted prior art of applicant further teaches the method of claims 1/12/32 respectively but does not explicitly teach the step of retrieving a stored measurement in deriving the predictive CQI. In an analogous art, **Bergel** said deriving step further includes retrieving at least one stored quality measurement and utilizing said at least one stored quality measurement and said at least one current quality measurement to derive said predictive CQI (S120, [0048, 0049] and Figure 4B). Therefore, it would have been obvious for one of ordinary skill in the art skill in the art at the time of the invention was made to combine the admitted prior art's teaching of deriving a predictive CQI with Bergel's teaching of deriving step predicts the future quality of the downlink communication channel to provide an improved compensation technique for transmission over a channel (0010).
11. Claims **4, 15 and 35** are rejected under 35 USC 103(a) as being unpatentable over **Qui** and Bergel and further in view of Koorapaty et al. (U.S. Patent Publication No. 2003/0129992, hereinafter **Koorapaty**).
12. Referring to claims **4, 15 and 35**, **Qui** and Bergel teach the limitations of claims 4,15 and 35, but do not teach storing predicted values. **Koorapaty** et al. teaches storing predicted values [0010]. Therefore at the time the invention was made, it would have been obvious to a person of ordinary skill in the art to combine the teaching of Koorapaty of storing predicted values to compare the predicted values with the measured values ([0012]).
13. Claims **5,16 and 36** are rejected under 35 USC 103(a) as being unpatentable over **Qui** in view of Bruckert et al. (U.S. Patent No. 5,305,468, hereinafter **Bruckert**)

Art Unit: 2617

14. Referring to claims 5, 16 and 36, **Qui** teaches the limitations of claims 5, 16 and 36, but do not teach wherein said deriving step utilizes a linear predictive algorithm to derive the predicted value. In an analogous art, **Bruckert et al.** teaches wherein said deriving step utilizes a linear predictive algorithm to derive the predicted value (Column 4, Lines 42-45). Therefore, it would have been obvious for one of ordinary skill in the art at the to combine the teaching of **Qui** with the teaching of Bruckert et al. wherein said deriving step utilizes a linear predictive algorithm to derive the predicted value to provide a more accurate power control command (Column 1, Lines 47-49).

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-5, 12-16 and 32-3 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paul Harper can be reached on (571) 272-7605. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
